1. The subject matter of claims 1 and 2 is novel and inventive (PCT Article 33(2) and (3)).
 - 1.1 A welding method or tack welding method with non-fusible electrodes, as mentioned in the preambles of claims 1 and 2, is generally known; see, for example, D1 to D4 and D7.
 - 1.2 The subject matter of claim 1 and of claim 2 differs therefrom by virtue of the features defined in the characterising parts of those claims.
 - 1.3 The present invention can be considered to address the problem of improving the quality of the weld seam in the start phase of the welding process.
 - 1.4 In D1, D5 and D7, the liquid molten bath is set in oscillating motion during welding and the welding arc voltage is determined in order to determine the quality of the weld seam. In D2 and D6, the liquid molten bath is set in oscillating motion during welding using a magnetic field. In D3 and D4, the liquid molten bath is set in oscillating motion during welding using a mechanical vibration device or sound waves.

There is nothing in the available prior art to indicate solving the aforementioned problem of interest in the manner specified in claims 1 and 2. The solution to this problem proposed in claims 1

and 2 of the present application thus involves an inventive step.

2. Claims 3 to 12 are dependent on claim 1 or claim 2 and therefore likewise meet the PCT requirements for novelty and inventive step.
